

## Update Apollo-FM with Pseudo

A pseudo is a file which is treated like a tape. We can email these to you and allow small changes to the system. Apollo-FM has a user front end to install these.

The pseudo file is placed in the default folder, which is usually **DRIVE:\Program Files\D3\D3Virtual**. Where **DRIVE** is the drive letter i.e. C, D, E. etc. Once the file is in the folder the user just clicks on the next button, as in the previous section. These updates are usually a requested modification, or a reported fault fix.
