

Copying an Account in the FSI to Become a Training Account

First, your data account needs to be saved to a pseudo-floppy on your hard drive:

- Log into your **DM** account
- Enter **SET-DEVICE** and select the pseudo-floppy whose device name ends with Pseudo0
- Enter **ACCOUNT-SAVE WIMSTRAIN** and press **ENTER**
- At the end of the save type **T-REW** to rewind the 'tape'.
- Now type **ACCOUNT-RESTORE ACCOUNT NAME** where **ACCOUNT NAME** is the new account name you wish to create.
- To the **account name on tape:** prompt, enter the name of your data account you have just saved. In the case above **WIMSTRAIN** and press **ENTER**
- Enter **UPDATE-ACCOUNT WIMSTRAIN** and press **ENTER**
- To the message **create user id from each account name** enter **Y** and press **ENTER**
- To the message **Enter MD file name** press **ENTER**

This has created a new account in the FSI to use for training. Next, you need to create a copy of your program account that will point to the training data:

- Enter **T-REW** and press **ENTER** to rewind the pseudo-floppy
- Enter **ACCOUNT-SAVE WEBHELPDESK** and press **ENTER**

This should give you a copy of your program account on your hard-drive. Next the account will have to be restored from the pseudo-floppy to a new account with a different name:

- Enter **T-REW** and press **ENTER** to rewind the pseudo-floppy so that the above data can be read
- Enter **ACCOUNT-RESTORE WEBHELPDESK.TRAIN** and press **ENTER**
- To the **account name on tape:** prompt, enter **WEBHELPDESK** and press **ENTER**
- This has now copied over your programs
- Enter **UPDATE-ACCOUNT WEBHELPDESK.TRAIN** and press **ENTER**
- To the message **create user id from each account name** enter **Y** and press **ENTER**
- To the message **Enter MD file name** press **ENTER**

You have now got to enter the **WEBHELPDESK.TRAIN** account and point it to the training data file:

- Log into the **WEBHELPDESK.TRAIN** program account.
- At TCL type **SELECT MD WITH *A2 = "WIMSTRAIN"** and press **ENTER**
- Type **ED MD** and press
- At the . type **P1]2]R/WIMSTRAIN/ACCOUNTNAME/]FI]P1** (where **]** is obtained by pressing the **Escape** key and not the **]** key, and **ACCOUNTNAME** is the new data account name.) and press **ENTER**
- Type **P1** and press **ENTER**

This should now point your copied program account to your training data account. You can now use the account as normal by logging out of it and then back in.
